

# Application and IT Solutions for Investment Banks and Capital Markets

## At a Glance

With competition in global capital markets increasing, growing revenue while securing investors' trust and confidence has become the CIO's most pressing challenge, taking precedence over the cost-cutting agenda of recent years. Perot Systems is uniquely positioned to address this challenge, providing deep domain expertise, best execution services, leading electronification products, and technology innovation. We can help your organisation respond quickly and confidently to market dynamics through:

- Post-trade automation, integration, and rationalisation solutions
- Client connectivity solutions
- Reference data services
- Enhanced order routing and management solutions
- SWIFT & Payment services
- Operational risk and compliance solutions

**RESPOND QUICKLY AND CONFIDENTLY TO MARKET DYNAMICS THROUGH INNOVATIVE, DOMAIN-SPECIFIC TECHNOLOGY SOLUTIONS.**

Through deep domain expertise, an extensive portfolio of interrelated services, and a cost-effective global delivery model, Perot Systems is uniquely positioned to provide the operational and technical expertise to help investment banks and capital markets solve their most pressing challenges.

Perot Systems possesses extensive knowledge and experience in the capital markets sector, earned in hundreds of successful engagements with financial institutions worldwide. We have continuously strengthened our domain expertise by hiring business and technical analysts with experience in investment banking and capital markets.

Our customers include global bulge-bracket investment banks, online brokerages, financial information providers and trading portals, custodians, international clearing agents, rating agencies, financial services firms, and related risk and analytical vendors. Our solutions, comprising applications, IT infrastructure and business processes, help organisations control costs, integrate and streamline processes, prevent fraud, manage risk, and adapt to changing regulatory mandates.

We have successfully completed integration for achieving internal and external STP, reengineered interfaces with market and matching utilities, and enhanced and supported scalable trade-processing platforms for centralised securities processing including custody and corporate action processing.

We are experts at reengineering legacy applications for end-to-end processing from deal capture to settlement. Whether managing legacy technologies, developing custom applications, implementing third-party solutions, or providing testing services, we apply our capabilities to help our customers achieve higher levels of business performance through reduced costs and increased efficiencies. We have performed extensive work in trade accounting and settlement systems, covering end-to-end processing of a wide range of instruments such as equities, bonds, and derivatives.

**Perot Systems can design, develop, deliver, and manage the solutions that meet the unique needs of your organisation in an increasingly competitive global marketplace. Our experience and expertise as a leading technology and systems integrator can help you achieve measurable results – and maximum value – from your applications and IT systems.**

Perot Systems has helped investment banks and capital markets meet their competitive challenges and adapt to changing regulatory requirements, delivering results like these:

- Provided support for over 200 applications for a bulge-bracket investment bank across equities, fixed income, credit, rates & currencies, derivatives, and wealth management services
- Migrated securities settlement system (second-largest in LSE) for equities with more than \$1 trillion open positions to complete a 200-man-year migration project
- Developed state-of-the-art, object-oriented workflow-based system for processing OTC derivatives
- Accomplished process optimisation and automation of securities processing value chain, resulting in reduction in batch-run time by more than 80% in some systems
- Developed FIX/SWIFT interfaces with market utilities to ensure STP
- Supported a robust back office for 24/7 centralised securities processing
- Developed tools such as XML converter to help major investment banks map externally obtained trade data and market information into internal XML formats for processing and use
- Performed Linux migration for a global investment bank's securities settlement system
