THE CHALLENGE

In late 2000, AARP needed help supporting their JD Edwards applications, enhancing information security, and consolidating data management—including reliable disaster prevention and recovery services. Because of a proven track record of success in data management, AARP selected Perot Systems to host and maintain their IT systems while providing apps support.

THE SOLUTION

AARP trusts Perot Systems to manage and administer critical database functions in a secure environment while providing full system application support. The Perot Systems team supports hardware, telecommunications, facilities and network infrastructure, as well as running the user help desk. We have leveraged our global sourcing and capability strengths to blend the best integrated services for AARP. Our highly-experienced consulting and applications solution teams both onshore and offshore puts extensive ERP expertise with Oracle and JD Edwards to work for AARP on a daily basis. We maintain a suite of unique tools that monitor Oracle database trends, track hundreds of performance-related statistics, and minimize storage requirements.

Ongoing projects are in-place to integrate and streamline IT operations across the AARP enterprise. Our team upgrades application versions for the underlying operating system, the Oracle Database Management System, the JD Edwards suites, and the application interfaces.

THE RESULTS

Over the years, the Perot Systems team enhanced apps interfaces, and designed and implemented new solutions that significantly improve the user experience. Plus, to protect AARP's electronic records, the secure Perot Systems IT Data Center in Plano, Texas provides a high level of security, integration, back-up, and disaster recovery services.

- Every SLA performance goal has been met with 99.99% uptime so service interruptions to AARP members are virtually non-existent.
- Several legacy programs have been retired to support standardization goals.
- Disaster Recovery planning and testing are so thorough that other DC-based agencies are mirroring our process.
- New initiatives are underway to merge operating systems onto a UNIX platform while upgrading online access onto a faster and more reliable network.

FUTURE DIRECTION

AARP knows as Americans age, we are all concerned about healthcare choices and long-term financial security. AARP is stepping up to this challenge with an external campaign entitled: **Divided We Fail**. This visionary program is designed to rally individuals, policymakers, and business leaders into a cohesive team working on long-term solutions for affordable, quality healthcare and stronger financial strategies.

To support the robust **Divided We Fail** plans, AARP is launching internal transformational change initiatives. Much of the technology groundwork put into place by Perot Systems will help meet these goals by consolidating business processes and aligning the enterprise for faster response.
