Perot Systems® PeopleSoft Upgrade Accelerator - What and Why?

As an Oracle Platinum Partner, the Perot Systems track record for delivering exceptional application upgrade services to private and public sector organizations is unmatched in the industry.

The Perot Systems PeopleSoft Upgrade Accelerator® solution offerings include:

- Upgrade Assessment Services
- End-to-End Upgrade Services
 - PeopleTools Upgrade
 - Application Upgrade

Perot Systems has developed proprietary PeopleSoft tools that help catalyze the PeopleSoft upgrade. The Peoplesoft Upgrade Accelerator tool helps in analyzing the nuances involved in the estimation phase of an upgrade process. The tool generates reports that provide vital information regarding dependencies and differences between the vanilla version and the existing production version of the PeopleSoft Objects. It can also generate a detailed report specifying the actions that need to be performed in the file-layer of the new version of PeopleSoft so that the client’s customizations are reflected in the new release.

Upgrade Accelerator Tool Benefits

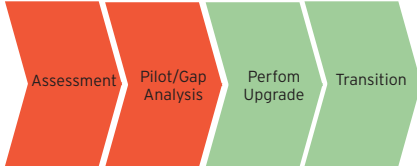

A typical upgrade process is a time-consuming and intricate procedure that requires a manual search for customizations in the client’s file-layer. It can also necessitate a copy of the client’s database or a high speed wired connection to access the client’s database through PeopleSoft Application Designer.

These extensive requirements can be overcome by using the Upgrade Accelerator tool. This self-executable tool can be run on the client’s machine and can be easily delivered to the client on a CD or via email. Hence, the unnecessary time and cost needed to establish a connection to the client’s database can be avoided. The tool enables data security because it does not require access to the client’s database. The output generated is encrypted, cannot be misused, and resists tampering.

How Does the Upgrade Accelerator Tool Work?

- Upgrade Accelerator generates an encrypted file of a few megabytes which the client can ship back.
- This file can then be decrypted and analyzed at our end by the Upgrade Accelerator generating a detailed report providing an estimate of the customizations.
- The tool can be run against the client’s file-layer of the client so as to generate a detailed comparison report specifying Object-type, Object-name, File-name, Line-text, Line-number, and action (such as: added, deleted, or customized).
- Using this report, developers can make changes at the exact location in the new release of the PeopleSoft file-layer, without any manual effort to search for changes.
- The Upgrade Accelerator tool reduces the total time for the upgrade process. The time needed to send the tool to the client, running the tool at the database, and analyzing the generated reports as well as the client’s file-layer, typically takes a maximum of 4-8 hours, thus substantially reducing overall effort.

The High Value Perot Systems Approach Includes Four Distinct Phases

- **Assessment** of the current technical and business environment.
- **Pilot/Gap Analysis**, which identifies the most prudent way to achieve the performance goals targeted during the Assessment.
- **Perform Upgrade phase**, which enhances the software package by applying identified fixes to customizations, modifying or developing new business processes and/or reporting capabilities by configuring new or previously unused portions of the system.
- **Transition** is the final stage, which involves a tightly coordinated effort to bring about project success.

So... Why Perot Systems?

Perot Systems understands the inherent complexities in PeopleSoft Application upgrade projects. We leverage the power of new application versions while retaining functionality from previous releases. Through our comprehensive testing processes, Perot Systems ensures continuous business continuity in the new application environment. Our migration and upgrade services include platform upgrades and application version upgrades across all Oracle product lines, and we have deep domain knowledge of all leading ERP applications to assist with migration and interface projects. Perot Systems also has extensive experience with legacy and proprietary programs.

Our repeatable methodology for implementations and upgrades, as well as our templates and proprietary tools (such as the Upgrade Accelerator), expedite the entire upgrade process. By using application upgrade services from Perot Systems, your company can realize added benefits while enjoying cost-efficiencies at the same time.

About Perot Systems

With more than 23,000 associates and 2008 revenues of \$2.8 billion, Perot Systems is a Fortune 1000 corporation. Drawing on deep industry experience and a portfolio of interrelated consulting, business process, application, and infrastructure services, we blend strategic design, proven technology, and timely delivery to create solutions that maximize returns on IT investments.
